Current Focus

AI Systems & Automation

Since early 2025, I've been developing AI solutions for businesses - from chatbots to comprehensive automation systems. Currently building AI integrations for travel industry automation (Langchain, RAG, Gemini, OpenAI).

I leverage cutting-edge tools like Claude Code and Google Antigravity to rapidly build and test MVP prototypes. Experienced in AI-generated imagery, video content, and automated content pipelines.

My Approach

In the age of AI and rapidly evolving tools, I believe architecture trumps technology. I work with React, Django, and modern stacks, but I'm framework-agnostic — the right solution depends on your project's unique needs.

Let's Create Something

I work with existing designs or collaborate from concept to launch. Open to creative projects, experimental web experiences, and innovative applications.
